

After opening my pool this year, the "Cell" light is blinking green, which signifies no chlorine is being generated. All other lights on the chlorinator are green. After re-installing the chlorinator, the "Cell" light stays solid green for a couple of minutes before returning to the problematic flashing state. The "Inspect Cell" light flashes when the cell cannot maintain adequate chlorine production. This can be due to low salt, cold water or a dying cell. Production stops when the light is flashing.
